**REASON FOR ALLOWANCE**

1. Kim discloses an emblem means comprising a housing secured in a central portion of a wheel disc of a car wheel, a rotating disk (3) rotatably coupled with said housing about a shaft formed in a central axial portion of said housing, with said shaft having an axis defined at a shaft center and coaxially aligning with an axle axis of the car wheel; a pendulum weight formed on a lower portion of said rotating disk; and a decorative feature including emblem, logo, trademark, figure and design formed on a front surface of said rotating disk; whereby upon rotation of said housing along with the rotation of a car wheel when driving a car, said rotating disk is gravitationally pendent to constantly orient said decorative feature in an upright position for a clear display thereof without being simultaneously rotated with the car wheel and the housing. Lalonde discloses a decorative display device for a hub cap of a vehicle wheel which is sealed to prevent dirt from entering the transparent face of the display device. The display device including a weighed disc. Goodman discloses a non-rotatable display wheel cover assembly comprising an inner member which is rigidly attached to the wheel. Defreitas discloses a wheel cover adapted to clip on to the vehicle wheel rim including a disc bearing an advertising indicia. However, none of the references of record suggests an emblem means comprising a cylindrical housing secured in a recess formed in a central portion of a wheel disc of a car wheel, wherein a bushing is formed in a central portion of the housing for engaging a bearing in said bushing for rotatably mounting a shaft therein in the manner defined in the instant claim 1 and in combination with other

limitations of the claims. Therefore, claims 7 and 9, depending therefrom, are considered to be allowable.
